

Supported Devices

CO-OP Mobile supports devices on the five major US wireless networks. Newly supported devices are added quarterly. Candidate devices are selected on the basis of minimum requirements to ensure a first-class, secure user experience. Requirements include:

- 128-bit SSL support
- adequate device memory and processing speed
- operator security certificate

Devices are added to and removed from the supported list based on in depth market research and device penetration analyses, feedback from client financial institutions, wireless operators and end users. Occasionally, support is discontinued for devices that have unacceptably high communications error rates, poor usability, or stability problems.
